# Continuous Security, Quality and Compliance Evidence

surveilr ensures your organization's cybersecurity, quality metrics, and regulatory compliance efforts are backed by a SQL queryable private *evidence warehouse* that can fit on your laptop — fully auditable without IT support and with little to no human intervention.

surveilr is a downloadable single binary that securely runs on Windows, Linux, and MacOS your infrastructure. Your data is always private and can only be shared if you allow it.

It's your data, don't give it away to AI scrapers or cloud vendors for free.
